Serial No. 09/479,648

Art Unit 1733

1. The disclosure is objected to because of the following informalities: (a) Page 5 line 19 and page 6 line 18 - change "to" before "the" to "with"; and (b) page 6 line 18 - delete the term "to be adhered to" as being unnecessary and/or redundant.

Appropriate correction is required.

- 2. The specification is objected to as failing to provide proper antecedent basis for the claimed subject matter. See 37 CFR 1.75(d)(1) and MPEP § 608.01(o). Correction of the following is required: There is no apparent support for the limitations of claim 31 in its entirety, the closest such disclosure apparently being found at page 8 lines 28-31 of the specification.
- 3. Claims 1-33 are rejected under 35 U.S.C. § 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicants regard as the invention. Specifically (a) if the term "heat neutral pressure source" is not a generally recognized term of art, then it is felt that it should be replaced by one that is; and (b) applicants' apparent intent is that claims 20-28 define an apparatus (ime. equipment) and NOT an "article" as now presented, such that these claims should be so amended along this line.
- 4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

Serial No. 09/479,648

Art Unit 1733

A person shall be entitled to a patent unless --

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- (e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.
- 5. Claims 20-28 are further rejected under 35
 U.S.C. 102(b) as anticipated by or, in the alternative, under 35
 U.S.C. 103(a) as obvious over Gladen.

Gladen discloses a bonding apparatus composed of a heat source and a removable, non-stick pressure pad (in the form of a TEFLON cloth) which is interposed between a press/pressure applying surface and a press charge. (Figure, Abstract, column 1 lines 21-23 and 42-67, column 2 lines 1-16).

6. Claims 1-19, 29 and 32-33 are further rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over either Raabe et al. or Hargarter et al.

Raabe et al. (Figure, Abstract, column 1 lines 5-28 and 44-66, column 2 lines 47-68, column 3 lines 1-10 and 35-60; column 4 lines 3-10 and 27-55 and N.B. lines 33-39, Examples 4-5) and Hargarter et al. (Abstract, column 10 lines 5-7, column 6

Serial No. 09/479,648

Art Unit 1733

lines 32-65 and N_B. lines 55-65, column 11 lines 44-63, column 12 lines 24-28) both disclose that it is known to adhere a multilayer, adhesive coated plastic film to a substrate via a process wherein the film is first heated to or above its softening point and then contacted with and pressed onto a substrate utilizing a roller pressure application means (which last foregoing is held/seen to be consistent/in agreement with applicants' specification at page 7 lines 4-5).

7. Claims 30-31 are further rejected under 35
U.S.C. 102(e) as anticipated by or, in the alternative, under 35
U.S.C. 103(a) as obvious over Ullmann et al.

Ullmann et al. disclose that it is known to assemble a heat source (consistent/in agreement with applicants' specification at page 8 lines 4-6) and accessories for use therewith in a case $i_{\pi}e$. in kit form. (Column 1 lines 6-14).

With each of the foregoing art rejections of paragraphs 5-7, any differences which might possibly exist between the envisioned, claimed inventions and the teachings of these respective references are held/seen NOT to constitute patentable differences.

- 9. The following is a quotation of 35 U.S.C. § 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth

Serial No. 09/479,648

Art Unit 1733

in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

- 10. Claims 1-19, 29 and 32-33 are still further rejected under 35 U.S.C. § 103(a) as being unpatentable over either Raabe et al. or Hargarter et al. each in view of Gladen (all of record above). It would have been obvious to one of ordinary skill in this art to employ the pressure pad of Gladen for its documented beneficial function in/in conjunction with the process of either of the primary references, wherever deemed desirable and/or necessary; mere utilization of a known (and again, beneficial) element involved.
- 11. Any inquiry concerning this communication or earlier communications from the examiner should be directed to J. J. Gallagher whose telephone number is (703) 308-1971. The examiner can normally be reached on M-F from approximately 8:30 A.M. to 5 P.M. The examiner can also be reached on alternate N/A.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Michael Ball, can be reached on (703) 308-2058. The fax phone number for this Group is (703) 305-3599.

Serial No. 09/479,648

Art Unit 1733

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the Group receptionist whose telephone number is (703) 308-0661/0662.

July 5, 2001

JOHN J. GALLAGHER
PRIMARY EXAMINER
ART UNIT 199

The below text replaces the pre-printed text under the heading, "Information on How to Effect Drawing Changes," on the back of the PTO-948 (Rev. 03/01, or earlier) form.

INFORMATION ON HOW TO EFFECT DRAWING CHANGES

1. Correction of Informalities - 37 CFR 1.85

New corrected drawings must be filed with the changes incorporated therein. Identifying indicia, if provided, should include the title of the invention, inventor's name, and application number, or docket number (if any) if an application number has not been assigned to the application. If this information is provided, it must be placed on the front of each sheet and centered within the top margin. If corrected drawings are required in a Notice of Allowability (PTOL-37), the new drawings MUST be filed within the THREE MONTH shortened statutory period set for reply in the Notice of Allowability. Extensions of time may NOT be obtained under the provisions of 37 CFR 1.136(a) or (b) for filing the corrected drawings after the mailing of a Notice of Allowability. The drawings should be filed as a separate paper with a transmittal letter addressed to the Official Draftsperson.

2. Corrections other than Informalities Noted by Draftsperson on form PTO-948.

All changes to the drawings, other than informalities noted by the Draftsperson, MUST be made in the same manner as above except that, normally, a highlighted (preferably red ink) sketch of the changes to be incorporated into the new drawings MUST be approved by the examiner before the application will be allowed. No changes will be permitted to be made, other than correction of informalities, unless the examiner has approved the proposed changes.

Timing of Corrections

Applicant is required to submit the drawing corrections within the time period set in the attached Office communication. See 37 CFR 1.85(a).

Failure to take corrective action within the set period will result in **ABANDONMENT** of the application.
